

TrialOne® Leader in Phase I clinic automation

Seamless access to high quality clinical data is paramount for assessing safety and efficacy profiles of a compound in early phase development. TrialOne® provides web-based enterprise solutions to address the unique challenges of Phase I studies, allowing for quicker decisions to move clinical products forward or to assess alternatives. Version 4 combines the experience of more than 10 years extensive usage in Phase I Clinical Research Units worldwide with state-of-the-art Internet and database technology.

Over the past decade, OmniComm Systems has established itself as a global leader of eClinical solutions, covering the entire clinical development life cycle. Our solutions help drive efficiencies and reduce cost through faster volunteer recruitment, screening, direct data capture, automation of work flow and data processing. TrialOne® offers end-to-end solutions for unparalleled Phase I study automation helping you to be competitive in today's changing world of clinical development.

OmniComm is a global provider of customer-driven eClinical solutions to organizations that conduct life changing clinical trial research. Omnicomm's growing base of satisfied customers is a direct result of the company's commitment to deliver products and services that ensure ease of use, faster study build, interoperability and better performance.

TrialOne[®], the leader in Phase I clinic automation

Key Features

- Web-based, end-to-end Phase I trial management solution providing study design, recruitment, data collection and reporting functionalities
- Optimized SQL database as single point for data collection and reporting
- Time-saving volunteer selection and tracking capability
- Comprehensive study setup including procedure scheduling, label preparation and automatic iCRF generation as well as internal labels
- Direct data capture from devices/instruments and real-time access to trial data
- Task-driven workflow to ensure efficient and timely completion of all study activities
- Complete management of samples including dispatch, tests and results
- Powerful, wizard-driven Ad-Hoc reporting
- Drag and drop label creation and printing through a web service dynamic database
- Real-time sponsor review of data and online query resolution tool

Key Benefits

- Enterprise application is scalable to accommodate various business requirements and lower total cost of ownership
- Single SQL database with end-to-end solutions replace need for single point solutions and increased staff and operational cost
- Highly configurable design tools to easily accommodate individual study requirements and mid-study protocol changes
- Single data capture and storage eliminates transcription errors while enhancing data quality
- Streamlined workflow resulting in greater resource efficiency involving study setup and operation
- Enhanced quality and integrity of data enabling early and informed go-no-go decision making
- Advanced reporting options improve operational effectiveness during the management of diverse study populations
